

Saumya Bhatt

Backend Software Engineer

+91 7016667671 | saumya.bhatt106@gmail.com | [LinkedIn](#) | [GitHub](#) | [Medium](#) | [Website](#)

Experienced Software Engineer with over three years of expertise in backend development and distributed systems. Skilled in building scalable, event-driven microservices and real-time data pipelines using Kotlin and Apache Kafka. Strong background in MLOps and ML Engineering — designing model serving platforms, feature frameworks, and inference pipelines powering large-scale machine learning applications.

TECHNICAL SKILLS

Languages: Kotlin, Java, Python, Javascript, Golang

Frameworks: Ktor, Spring Boot, FastAPI, NodeJS, ExpressJS, Flask, Django, ReactJS

Databases: PostgreSQL, Redis, MySQL, MongoDB, Elastic Search

Developer Tools: AWS, GCP, Kubernetes, Docker, Kafka, Firebase, Terraform

EXPERIENCE

Porter

June 2024 – Present

Software Development Engineer II

- Built, maintained, and deployed the model serving platform powering multiple ML models, serving **3–4 lakh inferences/day** with a **p95 latency of 200 ms**.
- Designed a **Python-based DSL framework** and CI/CD pipeline enabling Data Scientists to define offline and online features, reducing model deployment TAT from **1.5 months → 2 weeks**.
- Implemented a model inference logging pipeline ingesting **200 MB/s of logs** for model re-training and debugging.
- Built a reusable **A/B testing Kotlin library** for **real-time order streams (40 RPS)** enabling cross-service experiments with user-defined attributes; designed an adaptive balancing algorithm maintaining traffic splits within **0.1% error** despite uneven data distributions.

Porter

July 2022 – June 2024

Software Development Engineer I

- Contributed to the migration of core services from **AWS to GCP**, reducing infrastructure costs by **30%**.
- Built the **payments microservice** from scratch, now processing **88% of all online transactions** at Porter with **99.95% uptime**.
- Implemented dynamic routing between payment gateways based on user profile and region, improving payment success rate from **74% → 87%**.

Nucleus Software

July 2021 – December 2021

Software Development Engineer Intern

- Developed a customer segmentation dashboard for banks to perform **RFM analysis**, classifying users into 5 segments using a custom **K-Means clustering algorithm** trained on 100 K records.
- Indexed the classified data in **Elasticsearch** and built a **Spring Boot REST API** to serve it to a **ReactJS-based frontend** for interactive visualization.

EDUCATION

BITS Pilani, Goa Campus

B.E. Electronics and Electrical Engineering

July 2018 - August 2022

- Teaching assistant for **Object-Oriented-Programming (OOP)** course.

PROJECTS

Karya | *Kotlin, RabbitMQ, Redis, Postgres*

October 2024 – December 2024

- An open-source **distributed task scheduler** designed for high-throughput job scheduling with **delayed, recurring and custom workflows**. Built to scale horizontally, it supports **multi-language clients**, YAML configuration, plug-and-play integration, and **enables chaining tasks, hooks and custom actions** such as sending mails, Slack alerts, API calls, etc.

ClickStream Simulator 1.0 | *Kafka, RabbitMQ, SpringBoot*

January 2024 – May 2024

- End-to-end application to stream click events from a React-based web app to a python consumer that **triggers an email on suspicious activity in near-real-time** (lag of 1 second) using Kafka.
